Education

Jaypee Institute of Technology

B.Tech. in Electronics and Communication Engineering

Noida, India

2023 – 2027

Air Force Bal Bharati School

Senior Secondary Education, Science Stream

New Delhi, India

2010 – 2023

Technical Skills

Programming Languages: JavaScript, Python, TypeScript, PHP, C/C++

Tech Stack: React, Next.js, Node.js, Express, REST APIs, PostgreSQL, MongoDB, Tailwind CSS, WebSockets

DevOps & Tools: Git, GitHub, GenAI, AWS (Basic), Nginx, Reverse Proxies, Cloudflare, Rate Limiting, Authentication, Authorization, RBAC, Zod, File Upload Handling, PDF Parsing

Projects

Interview AI | *GenAI, React, Node.js, Express, MongoDB, JWT*

- Built an AI-powered interview preparation platform analyzing resumes against job descriptions to generate personalized interview strategies.
- Implemented resume parsing and skill-gap analysis to compute match scores and identify missing competencies.
- Integrated GenAI to generate structured outputs including technical questions, behavioral questions, and preparation roadmaps.
- Designed backend services with validation and controlled prompting to reduce hallucinations and ensure consistent responses.
- Developed secure authentication and file upload pipeline using JWT, Multer, and PDF parsing.

Autamail | *Next.js, Firebase Auth, Firestore, ZeptoMail, Nodemailer*

- Built a production-grade email automation platform used by the club during BitBox for sponsor and participant outreach, processing **1000+ emails** with zero duplication.
- Enabled bulk campaigns via CSV ingestion and **SHA-256 deduplication**, contributing to **Rs.1,00,000+ sponsorship outreach**.
- Implemented admin approval workflows and **RBAC** to control campaign execution and prevent unauthorized sends.
- Handled failure scenarios with retry queues and idempotent processing to ensure reliable delivery.
- Reduced **Firestore cost by 70%** using server-side APIs, pagination, and caching.

Achievements

Winner - Ride Hack 3.0

Dec 2025

Sahyatri – AI-Based Public Transit Occupancy System

- Deployed an edge AI system on Raspberry Pi 4 under constrained compute conditions.
- Built a hybrid YOLOv5-based model achieving **99% accuracy** for passenger detection across varying lighting conditions.
- Developed a React dashboard for live occupancy tracking, integrating with FastAPI-based backend services.

Position of Responsibility

GDG — Google Developer Groups

Aug 2025 – Present

Technical Lead

- Led development of the club's **official website (gdg-jiit.com)** and organized BitBox 6.0, driving **2,500+ registrations**.
